

This report is based on the DBMS Project on the topic of Indian Premier League Database. The database has a user centric design. In the time of statistics and data science, the database is used for displaying and analysing the statistical records of the previous 12 seasons of the Indian Premier League.

Chapter 1: Introduction to the System

1.1 Introduction

The **Indian Premier League (IPL)** is a professional Twenty20 cricket league in India contested during March or April and May of every year by eight teams representing eight different cities in India. There have been twelve seasons of the IPL tournament. The current IPL title holders are the Mumbai Indians, who won the 2019 season. On 13 September 2007, the BCCI announced the launch of a franchise-based Twenty20 cricket competition called Indian Premier League whose first season was slated to start in April 2008, in a "high-profile ceremony" in New Delhi, so far 12 seasons of IPL have been played. The tournament has grown rapidly in value over the years 2016-18, as seen in a series of jumps in value from one season to the next. The IPL as a whole was valued at US\$4.16 billion in 2016, but that number grew to \$5.3 billion in 2017, and \$6.13 billion in 2018. With eight teams, each team plays each other twice in a home-and-away round-robin format in the league phase. At the conclusion of the league stage, the top four teams will qualify for the playoffs. The top two teams from the league phase will play against each other in the first Qualifying match, with the winner going straight to the IPL final and the loser getting another chance to qualify for the IPL final by playing the second Qualifying match. Meanwhile, the third and fourth place teams from league phase play against each other in an eliminator match and the winner from that match will play the loser from the first Qualifying match. The winner of the second Qualifying match will move onto the final to play the winner of the first Qualifying match in the IPL Final match, where the winner will be crowned the Indian Premier League champions. The major entities of the league are the teams, players, coaches, player-statistics, stadiums, fixtures.

1.2 Problem Statement

Indian Premier League is a professional cricket league which consists of Eight teams having a squad of 15 players each, along with a head coach. with eight teams, each team plays each other twice in a home-and-away round-robin format in the league phase. At the conclusion of the league stage, the top four teams will qualify for the playoffs. The top two teams from the league phase will play against each other in the first Qualifying match, with the winner going straight to the IPL final and the loser getting another chance to qualify for the IPL final by playing the second Qualifying match. Meanwhile, the third and fourth place teams from league phase play against each other in an eliminator match and the winner from that match will play the loser from the first Qualifying match. The winner of the second Qualifying match will move onto the final to play the winner of the first Qualifying match in the IPL Final match, where the winner will be crowned the Indian Premier League champions.

Design a database management system for the Indian Premier League. The main objective of the database is to store and display the statistical data of all the players currently playing for an IPL team and also display the previous season's match schedule and results. Each user has a unique username and password and a favourite team. In the given project we will be designing a SQL Database which will help the user to analyse the statistics of each player playing for a team in IPL.

1.3 Functional requirements of the system

Coach: Displays the coaches' of all the teams with their age, year of joining and experience

Teams: Displays all the teams with their names, city, title, year formed, net worth and seasoned played

Home: Brings you back to the home page.

Player Stats: Has some more buttons which shows stats of good players.

Stadium: Displays the home ground of all the teams with their average, capacity and address.

Matches: Has some more buttons which shows all the matches played.

Most Runs: Orders all the players with decreasing runs.

Highest Scores: Orders all the players with highest scores.

Best Strike Rate: Orders all the players having best strike rate.

Best Batting Avg.: Orders all the players having best batting average.

Most Wickets: Orders all the players with decreasing wickets.

Best Economy: Orders all the players with best economy.

Best Bowling Avg.: Orders all the players having best bowling average.

Best Bowling Strike Rate: Orders all the players having best bowling strike rate.

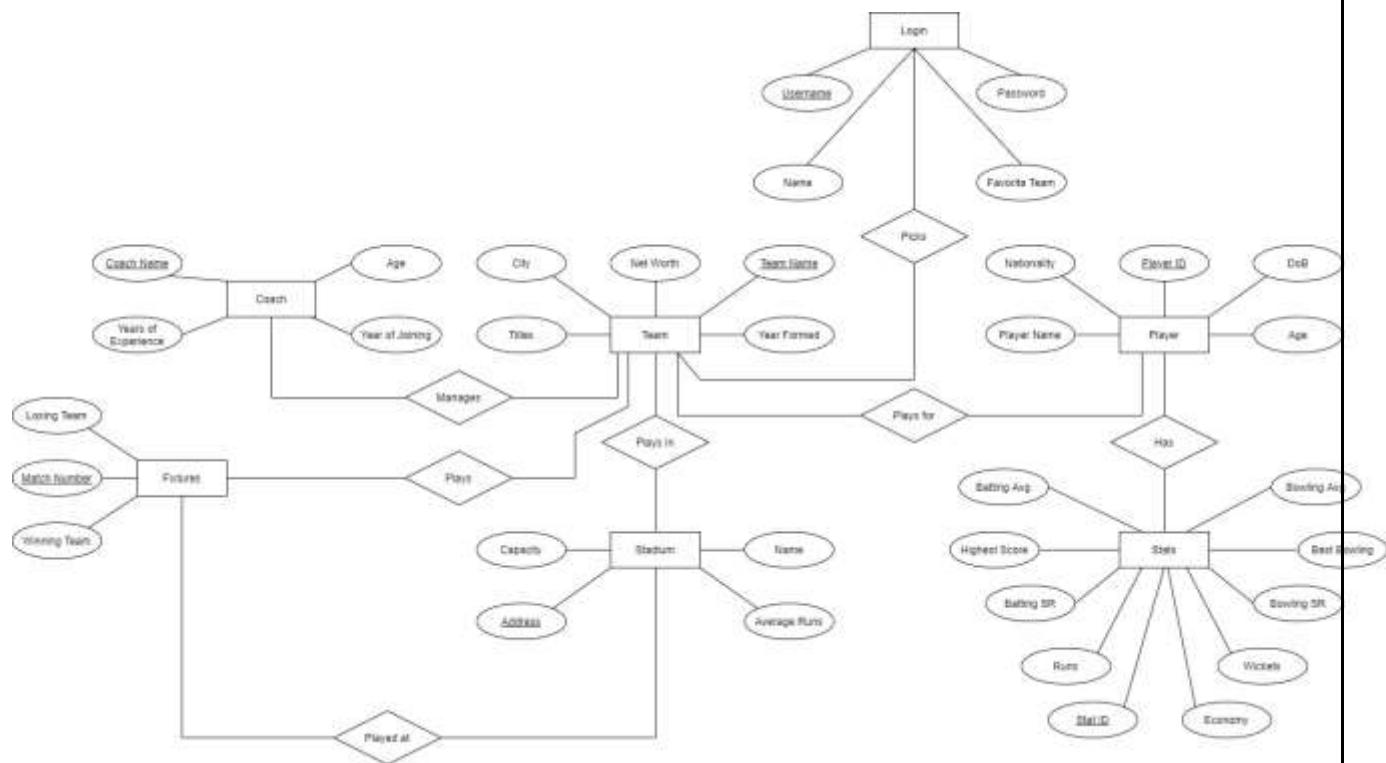

- User:
 1. Sign up on Login
 2. Select players from a teams for Super Over Face-off
 3. Search the statistical all time records of players.
 4. Search the fixtures and results of previous season.

1.4 Users of the System

Majorly the users of the system are fans of a team playing in the IPL or anybody from a statistical and data analysis background like coaches and data analysts.

Chapter 2: System Design and constraints

2.1 E-R Model

2.2 Reduction of ER to Relational Model

Team(**Team_Name**, City, Titles, Year_Formed, Net_Worth,
Season_Played)

Players(**Player_ID**, Name, DoB, Nationality, Age, Team_Name)

Stats(**Stat_ID**,matches,runs,top_score,batting_avg,batting_SR,
wickets,best_bowling,bowling_avg,bowling_sr,economy,player_
ID)

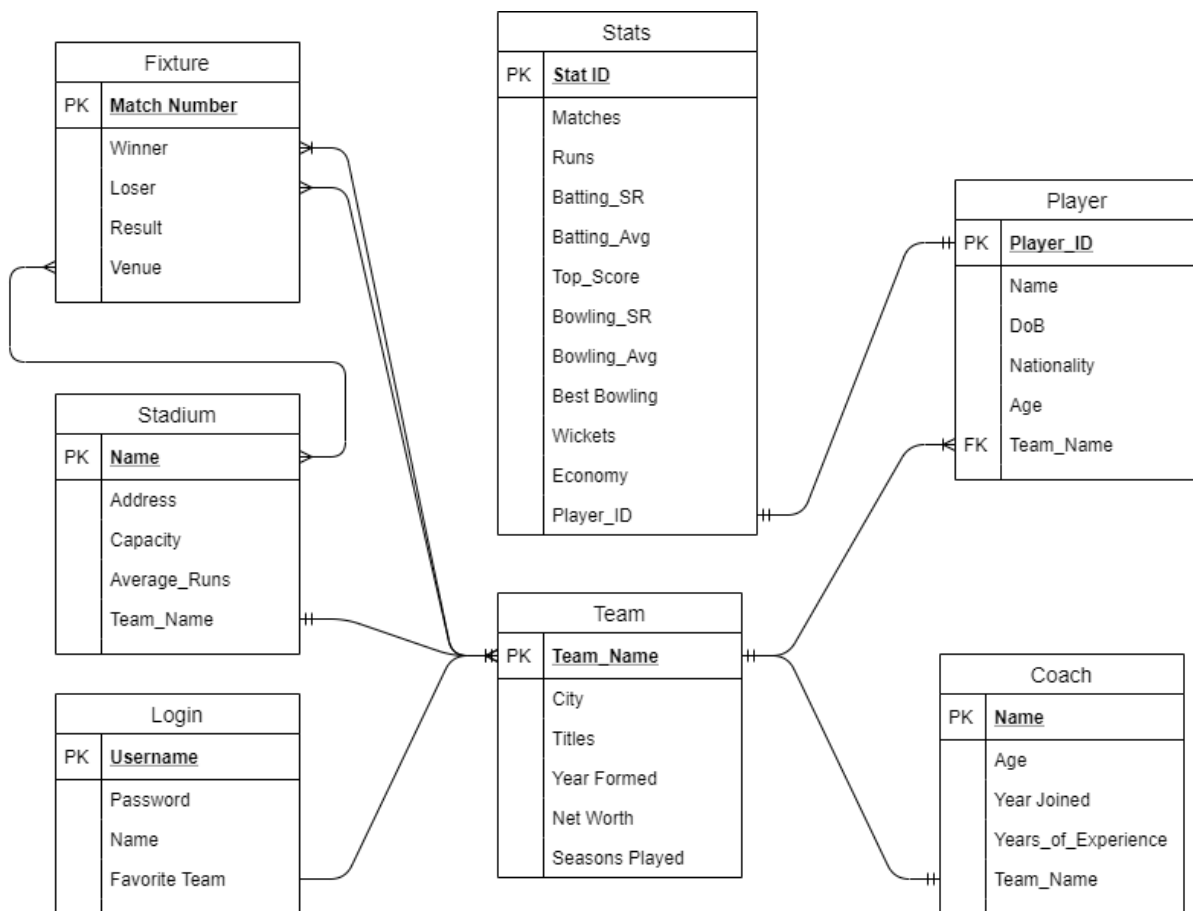

Coach(**Name**, Team_Name, Age, Year_Joined
,Years_of_Experience)

Fixture(**Match_Number**,Winner,Loser,Result,Stadium)

Stadium(**Address**,Name,Capacity,avg_runs,Team_Name)

Login(**Username**,password,name,favourite_team)

Favourite Team		Yes	Yes	

2.5 Normalization techniques applied on relational model

The relational model of our database system abides to all the three normal forms mentioned above and thus does not require further normalization.

Chapter 3: Implementation

3.1 Hardware and Software details (Front end and Back end details)

- **Backend: MySQL Workbench 8.0 CE**

MySQL is an Oracle-backed open source relational database management system (RDBMS) based on Structured Query Language (SQL).

- **Frontend Framework : Python Tkinter 3.7.7**

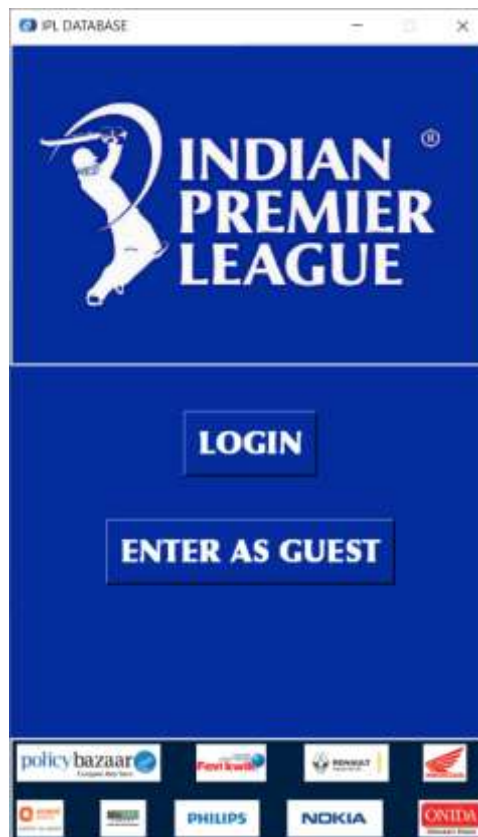

Python is an interpreted, object-oriented, high-level programming language with dynamic semantics used

3.2 Tools or library used

- MySQL Workbench – For creating the RDBMS
- Tkinter – For GUI
- From Tkinter import messagebox – for messagebox
- Mysql-connector – For connecting GUI and MySQL
- MS Paint
- Photoshop

3.3 SCREENSHOTS AND DESCRIPTION

1. Screenshot of Home Page

8. Implementation of display query on Coach table

COACH	TEAMS	HOME	PLAYER STATS	STADIUM	MATCHES
Name	Team Name	Age	Year of Joining	Experience	
Andrew McDonald	Rajasthan Royals	38	2020	4	
Anil Kumble	Kings XI Punjab	49	2019	4	
Brendon McCullum	Kolkata Knight Riders	38	2019	1	
Mahela Jayawardene	Mumbai Indians	42	2017	5	
Ricky Ponting	Delhi Capitals	45	2018	6	
Simon Katich	Royal Challengers Bangalore	44	2019	5	
Stephen Fleming	Chennai Super Kings	46	2009	10	
Trevor Baylis	Sunrisers Hyderabad	57	2020	16	

The table displays the results of a query on the Coach table. It lists eight coaches with their names, team names, ages, years of joining, and experience. Below the table, there is a row of eight portraits of the coaches, each wearing a different colored cap and jersey, corresponding to the teams listed in the table.

9. Implementation of display query on Teams Table

COACH	TEAMS	HOME	PLAYER STATS		STADIUM	MATCHES
	Name	City	Titles	Year Formed	Net Worth	Seasons Played
	Chennai Super Kings	Chennai	3	2008	732 million USD	10
	Delhi Capitals	Delhi	0	2008	369 million USD	12
	Kings XI Punjab	Mohali	0	2008	593 million USD	12
	Kolkata Knight Riders	Kolkata	2	2008	738 million USD	12
	Mumbai Indians	Mumbai	4	2008	809 million USD	12
	Rajasthan Royals	Jaipur	1	2008	305 million USD	10
	Royal Challengers Bangalore	Bangalore	0	2008	695 million USD	12
	Sunrisers Hyderabad	Hyderabad	1	2013	497 million USD	7

	Sunrisers Hyderabad	Hyderabad	1	2013	497 million USD	7

4.1 Database Structure

We designed a database management system for the Indian Premier League with the goal of displaying the statistical data of all the players currently playing for an IPL team and also to display the previous season's match schedule and results.

This database should be able to satisfy our user's need of and becomes a benchmark for further improvement/addition.

The project has scope of adding various other leagues and in depth statistical parameters
